***Specification***

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should avoid using phrases which can be implied, such as, "The invention relates to"(abstract, line 1).

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 3-6 and 54 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The subject matters in claims 3-6 such as "the first node and the second node are the same node"(claims 3 & 54); "the first node and intermediate node are the same node"(claim 4); "the second node and the intermediate node are the same node"(claim 5); "the first node, the second node, and the intermediate node are all the same node"(claim 6) are enabling the forming steps/functions of a first connection between the first node and the intermediate node, a second connection between the second node and the intermediate node, and splicing step/function for forming a first composite flow between the first node and the second node (claims 1-2 & 52).{see specification of the disclosure on page 19, lines 29-30}

***Allowable Subject Matter***

4. The following is an examiner's statement of reasons for allowance:

Claims 1-2, 7-53, 55-58 are allowable because the prior art of the record fails to teach "splicing the first flow and third flow to form a first composite flow originating at the first source flow end on the first node and terminating at the third destination flow end point on the second node in a manner whereby the second flow and the fourth flow remain unchanged" which is considered in combination with other limitations that recited in claims 1-2, 7-53, 55-58.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Bhagwat et al (5,941,988) discloses a method of merging two separate TCP connections terminating at a common host and gluing (splicing) them into a single connection between two end systems.

Lacas et al (5,245,604) discloses a method for splicing stations into a sequence or splicing stations out of the sequence in accordance with communications from such stations with effecting the operation of other stations in the sequence.

Art Unit: 2665

Dowd et al (6,141,755) discloses an active connection management for determining the approval of a connection based on signaling information and network state information. Once a flow has been validated, the cells associated with that flow are allowed to proceed through the firewall at line-speed.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phuongchau Ba Nguyen whose telephone number is 703-305-0093. The examiner can normally be reached on Monday-Friday from 10:00 a.m. to 3:00 p.m..
